Application of: John E. Johnson

Serial No.: 10/604,306

Amendment C

Amendments to the specification:

Please amend paragraph [0040] as follows:

[0040] However, an air-mixing valve with the liquid jet head can be utilized for a combination

fluid of liquid and gas (such as standard air). High-pressure tubing in communication with a

vacuum pump can be utilized to deliver a high pressure fluid to a nozzle attached to one end and

in fluid communication with the tubing. The nozzle can provide one or more jet streams of fluid

and the nozzle streams can be rotating or non rotating. Various nozzle designs can be used to get

the desired spray pattern. This along with a good vacuum could eliminate/reduce the added

liquid. Refer to Fig. 2A, item 204.

No new matter is added.
